

Specifications

Riddle buckets

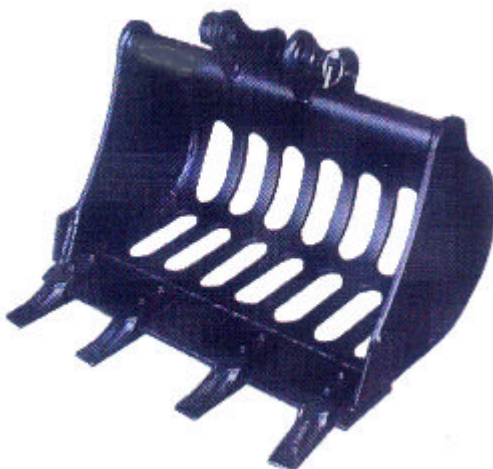

Riddle buckets are available for 1 to 40 ton excavators for the sorting of materials on site they are a relatively cheaper option than screens for reusing materials on site.

The prices given are recommended examples of the standard sizes normally used, although any size or specification can be manufactured. For the bucket build specification see the appropriate page for the standard digging buckets.

SAO225 20 ton size bucket

All riddle buckets are fitted with Kingmet teeth as standard unless requested otherwise.

SAO 278 1 ton size bucket

Riddle buckets can be manufactured with 2 different types of back depending on the size of the machine. Smaller buckets have a thicker than standard back plate with holes profiled in it. Larger machines have profiled riddles that are spaced at the required gap and are then welded in place with 2 cross supporting bars for strength.
